Researchers within this field study the location, distribution and organization of economic activity all over the world. Economic geography is important in developed nations, such as the United States, because it allows researchers to understand the structure of the area's economy and their economic interaction with other areas around the world. It is also important in the development of nations because the reasons and the devices of development or lack are more easily understood. Because economy is a great theme of study, it is also economical geography. Some topics that are considered economy geography include agroturismo, the economic development of various countries and national national and gross national products. Globalization is also extremely important for economic geographers today because it connects much of the economy of the world. The field of economic geography continued to grow as the European nations have begun to explore and colonize different regions around the world. During these times, European explorers made maps describing economic resources, such as spices, gold, silver and tea that they believed would be found in places like the Americas, Sia and Africa (wikipedia.org). They based their exploits on these maps and as a result, the new economic activity was brought to these regions. In addition to the presence of these resources, exploiters also documented the negotiating systems that native people of these regions are involved. At the farmer and economist of mid-1800, Johann Von Thänen developed his model of use of the agricultural land. This was an initial example of modern economic geography because it explained the economic development of cities based on land use. In 1933, Geographer Walter Chrisaller created his central central Theory that used economics and geography to explain the distribution, size and number of cities around the world. At the end of World War II, general geographic knowledge increased considerably. Economic recovery and development after the war led to the growth of economic geography as an official discipline within geography, because the geographers and economists are interested in how and why economic activity and development were occurring and where it was all over the world. Economic geography continued to grow in popularity over the 1950s and 1960s, since the geographers have tried to make the subject more quantitative. Today economic geography is still a very quantitative field that focuses mainly on topics such as business distribution, market research and regional and global development. In addition, both geographs and economists study the topic. Today's economic geography is also very dependent on geographic information systems (GIS) to conduct research on markets, corporate placement and supply and demand for a certain Product for a area. The temperic economic geography is the widest of the branches and geographers within this subdivision focuses mainly on the construction of new theories of how the economy of the world is organized. Regional economy geography analyzes the economies of specific regions around the world. These geographies analyze local development as well as the relationships that the specific regions have with other areas. Historical economic geographers analyze the historic development of a area to understand their economies. Behavioral economic geographs are concentrated in the area of a area and their decisions to study the economy. Crystal economic geography is the final theme of the study. It has developed from christian geography and geographers in this field attempt to study economy geography without using the traditional methods listed above. For example, chronic economic geographs usually analyze the economic inequalities and the dominance of a region on another and how that dominance affects the development of economies. In addition to studying these different topics, the economic geographers are also often studying very specific themes related to the economy. These themes include geography of agriculture, transportation, natural resources and commerce as well as topics as commercial geography. Journal of Economic Geography Each of these articles is interesting because they are very different from each other, but all focus on some aspect of the economy of the world and how it works. England is part of the UK from Europe (England, Scotland, Wales and Northern Ireland), and is located on the island of Grand -bretan. England is not considered a separate nation, since it is governed by the United Kingdom. It is limited by scapefully to the north and in Wales West. England has coastline along the Celtic, North and Irish and the English canal, and its area includes more than 100 small islands.eniland has a long history with the human settlement that date back to -historic times, And it became a unified region in 927. It was then independent Kingdom of England until 1707, when the realm of Grand -Bristan was founded. In 1800, the United Kingdom of Grand -brutanha and Ireland was formed, and after some political and social instability in Ireland, the UK of Grand -bretan and Northern Ireland were formed in 1927.
